

With IRIS you make online eye contact. You forget the distance, the technique: it feels as if you are face-to-face in discussions. IRIS is the flexible alternative for video conferencing and fits perfectly at every desk. IRIS is always ready to use in combination with all web conferencing and video chat programs. A handy extra: you can use IRIS as a second monitor. The biggest advantage is however that IRIS even works if the others do not have IRIS. IRIS is therefore the most flexible tool on the market.

IRIS Anti Echo: that feels like a face-to-face conversation

IRIS Anti Echo

This model has an integrated 'Acoustic Echo Cancellation' (AEC). This prevents an echo of your voice during conversations. IRIS Anti Echo can be used with software without integrated anti echo technology.

Specifications IRIS Anti Echo
