

With IRIS you make online eye contact. You forget the distance, the technique: it feels as if you are face-to-face in discussions. IRIS is the flexible alternative for video conferencing and fits perfectly at every desk. IRIS is always ready to use in combination with all web conferencing and video chat programs. A handy extra: you can use IRIS as a second monitor. The biggest advantage is however that IRIS even works if the others do not have IRIS. IRIS is therefore the most flexible tool on the market.

IRIS Contact Center: that feels like a face-to-face conversation

IRIS Contact Center

This IRIS is especially suited for contact centers or call centers, because it has no microphones and speakers.

Specifications IRIS Contact Center

What do you need to be able to work with IRIS?
A Macintosh or Windows PC / Notebook with:

- Windows® XP, Windows Vista™ or Mac OS 10.4.11 or later
- Pentium® P4-processor (or compatible), 1,4 GHz (2,4 GHz recommended) G4 800 MHz+
- 512 MB RAM (1 GB recommended)
- An internet connection (broadband recommended)
- Any available USB 2.0 port
- Any available VGA or DVI port
- 100/240 V, 50/60 Hz, 1.7 A supply

Accessories IRIS Contact Center

Because the IRIS Contact Center has no microphones or speakers, the use of a VoIP phone or USB headset is required.

- **USB VoIP phone**
- **USB headset**
