

With IRIS you make online eye contact. You forget the distance, the technique: it feels as if you are face-to-face in discussions. IRIS is the flexible alternative for video conferencing and fits perfectly at every desk. IRIS is always ready to use in combination with all web conferencing and video chat programs. A handy extra: you can use IRIS as a second monitor. The biggest advantage is however that IRIS even works if the others do not have IRIS. IRIS is therefore the most flexible tool on the market.

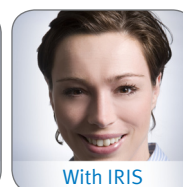

IRIS: that feels like a face-to-face conversation

Specifications IRIS

What do you need to be able to work with IRIS?
A Macintosh or Windows PC / Notebook with:

- Windows® XP, Windows Vista™ or Mac OS 10.4.11 or later
- Pentium® P4-processor (or compatible), 1,4 GHz (2,4 GHz recommended) G4 800 MHz+
- 512 MB RAM (1 GB recommended)
- An internet connection (broadband recommended)
- Any available USB 2.0 port
- Any available VGA or DVI port
- 100/240 V, 50/60 Hz, 1.7 A supply

Accessories IRIS

IRIS works fine without the need for extra accessories.

But in some situations they come in handy. Not all web conferencing / video chat programs uphold 'Acoustic Echo Cancellation' (AEC).

Besides, sometimes you do not want others to listen in during your conversations. The accessories in our program:

- **USB conference speaker phone with AEC**
- **USB VoIP phone**
- **USB headset**

Width : 41 cm
Height : 87 cm
Depth : 40 cm
